SUMMARY

Computer Science major specializing in Artificial Intelligence with hands-on project experience developing AI/ML, full-stack, backend, and cybersecurity applications. Experienced in fine-tuning transformer models, building REST APIs, integrating LLMs, and developing secure software solutions using Python, PyTorch, FastAPI, Flask, and JavaScript.

EDUCATION

- **B.S. in Computer Science with Specialization in Artificial Intelligence**
Oakland University, Michigan, United States — Expected Graduation: December 2026

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C++, C#, JavaScript, SQL.
- **AI/ML:** PyTorch, Scikit-learn, Streamlit, Pandas, NumPy, NLP, LLM Integration, Prompt Engineering.
- **Backend & APIs:** FastAPI, Flask, REST APIs, API Integration.
- **Developer Tools:** Git, GitHub, VS Code, MySQL Workbench, Jupyter Notebook, Google Colab, Figma, Linux/Unix.
- **Security:** AES, PBKDF2, bcrypt, SHA, HTTPS/SSL, DNS Verification, SPF.
- **Relevant Coursework:** Data Structures & Algorithms, Artificial Intelligence, Machine Learning, Computer Networks, Operating Systems, Cybersecurity, Visual Computing, Database Systems.

PROJECTS

Risk Reveal AI — Smart Phishing Detection Assistant (Full-Stack AI Application):

- Developed a full-stack phishing detection web app that flags malicious emails and generates plain-English, explainable-AI justifications for each verdict.
- Fine-tuned a DistilBERT transformer on 18,500+ combined samples from two Kaggle phishing datasets for binary phishing classification, training on GPU-accelerated Google Colab.
- Designed a multi-signal weighted risk-scoring pipeline that fuses transformer-based language analysis, structural URL inspection, and DNS-level sender verification into a single risk score.
- Built the back end using Python/FastAPI and front end using HTML/CSS/JavaScript, integrating Groq Llama 3.3 70B LLM for natural-language explanations.

AI Detector & Humanizer App (Full-Stack AI Application):

- Developed a full-stack web application to detect and rewrite AI-generated text with the help of NLP and LLMs.
- Created a complete end-to-end workflow including API integration, Kaggle data set testing, and evaluation of the rewritten text.
- Completed benchmark detection performance using Scikit-learn and Pandas, achieving approximately 90% detection accuracy.
- Built the backend using Python/Flask, and the frontend using HTML/CSS/JavaScript.

PC Inventory System — Database Design & Implementation:

- Developed a desktop-based application using MySQL to track inventory of hardware for small and medium sized businesses throughout the inventory cycle.
- Designed a normalized relational database schema supported by comprehensive EER diagrams.
- Created Figma UI mockups for customer, administrator, and checkout workflows.
- Collaborated on a 4-member Agile team with weekly checkpoints, owning a share of backend, UI, and testing responsibilities.

Secure Password Manager (Full-Stack Web Application, Cybersecurity Project):

- Built a secure web application for password storage and generation using modern cryptographic techniques.
- Created a zero-knowledge architecture with client-side encryption to prevent plaintext credentials from reaching the server.
- Implemented PBKDF2, bcrypt, and SHA using in-browser cryptography libraries and deployed over HTTPS/SSL.

CERTIFICATIONS & TRAINING

- **Cybersecurity Bootcamp — University of Michigan (2022–2023):** Trained in ethical hacking, pen testing, cryptography, vulnerability assessment, and secure coding via Wireshark, Burp Suite, and Metasploit.
- **The AI Engineer Course and Bootcamp — Udemy (2025):** Implemented and assessed AI models through hands-on projects in machine learning, large language models, and end-to-end development using Python, PyTorch, TensorFlow, Hugging Face, LangChain, FastAPI, Docker, and Streamlit.
